

MICHAEL LINARES

MID-LEVEL FRONTEND DEVELOPER

SUMMARY

Frontend Developer with 6+ years of professional experience building production-ready applications in React, Vue, and TypeScript. Web design background translates into sharper UX decisions and closer collaboration with designers.

EXPERIENCE

FRONTEND DEVELOPER

MONTREAL

Feb 2024 – Apr 2026

- Drove Vue 2 → Vue 3 migration across the entire frontend codebase, rewriting component logic to Composition API and setting the foundation for long-term maintainability.
- Owned frontend integration of new REST API endpoints, aligning contracts between teams and handling edge-case error states that weren't covered in specs.
- Eliminated recurring production bugs by addressing root causes rather than symptoms, reducing repeat support tickets on the same issues.

FULLSTACK DEVELOPER

EFS-INNOVATION

Oct 2022 – Jan 2024

- Built and maintained a Vue.js / Nuxt component library consumed across multiple enterprise applications, becoming the single source of truth for UI patterns at scale.
- Established a Jest testing baseline for core components, enabling confident refactors and catching regressions before they reached production.
- Owned the design-to-code handoff, becoming the reference point between designers and engineering for translating Figma specs into production interfaces.

Feb – Sep 2022 · Career pause — international relocation to Poland.

FREELANCE FRONTEND DEVELOPER

PUNTA CANA, DOMINICAN REPUBLIC

Jan 2019 – Jan 2022

- Sole frontend owner across the full delivery lifecycle — from requirements and design to deployment — for client-facing websites, landing pages, and web apps.
- Delivered responsive, cross-browser interfaces and managed multi-project versioning with Git in a fast-paced freelance environment.
- Advised and implemented WordPress solutions for non-technical clients, handling performance tuning and visual asset production end-to-end.
